

## WHEN WILL I SEE RESULTS?

You will work up to a maintenance dose over a 3 month period. Drops are taken every day and many patients will notice an improvement in their symptoms within 3-6 months. Typically, patients are on therapy for 3-5 years depending on the severity of their symptoms.

## WHO BENEFITS FROM ALLERGY DROPS?

- Infants and children with allergy related rashes
- Those with multiple sensitivities
- Those with chronic conditions
- Those with food and mold allergies
- Those with multiple allergies to dust, dust mite, trees, grasses and animals.

## WILL INSURANCE COVER THE COSTS?

Insurance covers the cost of seeing your provider for all related services, including testing and any office visit charges.

Insurance *does not* cover the cost of the drops. Individuals may require different dosing of drops on a daily basis. Therefore, patients will go through bottles at varied rates. The cost per bottle is \$195, and the average patient uses 3-5 bottles annually.

Stone Medical P.C.  
 FUNCTIONAL ALLERGY PROGRAM

*The serum (starter kit and/or maintenance drops) will be drop shipped to your door, 7-10 business days following payment*

## STONE MEDICAL, PC

## FUNCTIONAL ALLERGY AND NUTRITION PROGRAM

## Sublingual Immunotherapy

SAFE. EASY. PAINLESS.  
EFFECTIVE.

TREAT THE SOURCE OF YOUR ALLERGIES  
WITHOUT SHOTS

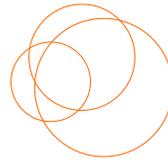

## DO YOU EXPERIENCE ANY OF THESE SYMPTOMS?

Nasal discharge	Nasal Congestion
Itchy Eyes	Watery Eyes
Cough	Wheezing
Sneezing	Poor Concentration
Frequent Headaches	Fatigue
Frequent Colds	Chronic Sinusitis
Joint Pains	Muscle Aches
Asthma	Eczema
Ear Infection	Abdominal Issues
Circles Under Eyes	

We are pleased to offer a “NO SHOT” functional allergy treatment called Sublingual Immunotherapy. By exposing your body to small amounts of allergens, continually, it will learn to ignore them. As the therapy continues, the immune system will stop overreacting to the allergens, and overtime they will go away.

You will administer the therapy drops under your tongue to start the desensitizing process. This is done at home everyday. It makes drop therapy more convenient than traditional shot therapy.

Shots are effective, but have several disadvantages, the two most important being discomfort and potential adverse reactions. This has led doctors to seek alternative means of treating allergy.

## ARE ALLERGY DROPS SAFE?

Allergy drops have been used in Europe for 60 years and have been highly studied for safety and efficacy.

Drops have been proven to be a safe and effective alternative to allergy shots. Minor local reaction can sometimes occur, but there have been no reported cases of anaphylaxis with specific dosing of the program.

## WHAT ARE THE ADVANTAGES OF SLIT DROPS?

- Painless
- Convenient due to home dosing
- Proven far safer than shots
- Lower cost, with fewer clinic visits
- Faster onset of symptom relief

## HOW DO I BEGIN?

The program will be described in detail by the program coordinator or one of the providers at Stone Medical, PC. Allergy testing will be done with either skin or serum tests. Our office will see you in one month following your first appointment, and every three months after that. As part of the allergy program, you will also meet with our registered dietitian and functional nutritionist to be given dietary recommendations as part of the overall success of Stone Medical’s functional and comprehensive allergy program. Follow-up calls will be made after all appointments.
